INTELLIGENT ICE TEST REPORT

We have been conducting non-clinical tests of the cooling effect of the Intelligent Ice and found the following results:

- The product lasted in a cold state for up to 8 hours in the cover on the table. The benefit of this would be if you travelled to an event and wanted to put it on after the event you would still have hours of use.
- We found the product when strapped to the body retained the cold effect for 4 hours before all the ice had completely melted.
- We did not experience any freeze burn or any uncomfortable freezing sensation just a constant comfortable cold effect.
- We were surprised by the longevity of the ice and feeling of coolness from the product when we checked it after 3 hours. Even when it looked to be thawed out in some sections, we found the product to still maintain the cooling effect.
- We found after a while the product did not seem to feel cold but when we removed the Intelligent Ice and felt our body where it had been attached it was completely cold.
- We found the Intelligent Ice very easy to use with the multi strapping cover and flexible cells, this is an excellent product.
